Category:13th-century establishments in Wales Category:Economic history of Wales---
abstract: 'Theoretical models predict a dependence of the minimum mass of spinning
black holes on the impact of the surrounding accretion disk. The existence of
observational evidence for this dependence would validate the theory. However, a
statistical review of several observations of supermassive black holes shows that it
is difficult to significantly constrain the spin of the black hole. This paper
illustrates how a simple detector with a particular geometry and detector properties,
which in general are not well known or understood, could yield useful information for
constraining the spin of black holes.' author: - | B. S. Sathyaprakash\ School of
Physics and Astronomy,\ University of Minnesota, Minneapolis, MN 55455-0154 title:
'Constraining black hole spin using gravitational wave detectors' --- This work was
