Multiple templates for each document format  Insert images and hyperlinks from anywhere on the Internet  Supports for conversion of documents to PDF and e-mailing  Unlimited templates and user-friendly interface  Supports drag and drop: Drag and drop is the more convenient way to move data from one place to another. This enables users to organize data without the need to copy and paste or to drag and drop from one application to another.  Supports drag and drop: Drag and drop is the more convenient way to move data from one place to another. This enables users to organize data without the need to copy and paste or to drag and drop from one application to another.  Supports multi-user: Multi-user is a useful feature that allows to store information in such a way that it can be retrieved quickly from one place.  Supports customization: A document template can be customized by adding new columns, changing the appearance of the document, changing the column order, adding new text groups, adding or removing from the list of objects, and changing the text or background color, fonts and font size of the document.  In-depth document analysis: Over a dozen document analyzers and report generators are used to analyze your document and to generate a detailed report.  Free design: You are not bound to any template; you can design your document in the same way that you would design your business plan if you were making a business presentation. DocumentBurst Server requirements:  .Net Framework 3.5 and 3.0 (for 32-bit) or 4.0  7-Zip: required to decompress the \*.docx files.  Microsoft Excel 97/2000/XP/2003/2007  Microsoft Word 2003/2007/2010  Lotus Notes: necessary to run the server as a Windows service.  Microsoft Virtual PC: if you want to run the program on a Windows server

### What's New In DocumentBurst Server?

Ceres is a multi-user document distribution system that allows you to distribute large amounts of documents, sort them, and update them from the database. Several developers have used this tool to build document management solutions that can be used on their company intranet. With Ceres, you can upload documents and create groups of documents. You can also attach documents to a document and sort them based on a specific attribute. You can also create, access, edit, and delete documents. Ceres Server Description: To be on target with your documents, you need reliable document tracking systems. With the help of this program, you will be able to sort and classify your documents. You will be able to find specific documents or files and then use them for specific applications. The application provides a system for document management that allows you to distribute important information in a single location. Additionally, you can install several types of Windows services so that the program will always run no matter what applications are installed on your system. Ceres Server Description: Solitaire is an application that allows you to distribute and maintain corporate and departmental documents. You will be able to add documents, edit them, and sort them based on their attributes. The program also allows you to create new documents and to access them using a web browser. You can use the program to manage documents from a centralized server and a local backup server. Solitaire Server Description: CTI is a system that is designed to support document management systems. The CTI Server is flexible, scalable, and offers excellent performance. The application enables you to reduce the time you spend on file management by allowing you to access your documents from several computers. You will be able to sort documents based on their importance. The program is designed to work with files and documents you have already created. You can use the program to create and distribute documents in a corporate environment. Additionally, you can upload documents to the system using a Web browser. CTI Server Description: The DMS Store is a useful tool that you can use to manage and store documents. You can use the application to create and sort documents and to access them easily from anywhere in your organization. Using the application, you can store documents in multiple locations. For example, you can upload important documents to the system and then share them with coworkers and customers. The application will allow you to create several types of groups. You can also assign colors to different categories of files. DMS
